1.	
2.	serious efforts towards increasing the international ranking, and providing us the opportunity to work with international and domestic institutions in order to improve our practical capabilities.
3.	It would be highly appreciated if the university could provide an office room for PhD students with printing facilities.
4.	In the beginning, the doctoral class was not proper at all; it was too small and worse. I now appreciate that the class has moved to the proper room. I recommend that the doctoral school provide offices for Ph.D. students; this is done in other Universities, and it is very helpful for students who are interested in studies and research. Another issue that I can recommend the doctoral school to pay attention to is the time the supervisors give the Ph.D. student. Imagine this is a whole year, and I have never met my Supervisor. I found this to be a positive and delicate issue that should be addressed. At least there should be a face-to-face meeting once per month. Otherwise, it is very hard to perform our thesis well.
5.	It is well-organised. However, for better conditions it is necessary to provide feedbacks for every student on their homework or presentations. Presentations of the lecturers in certain platform would be even nice for having access anytime for students.
